

UAM Philippines, Inc. Plants Trees for a Greener Future at Makiling Agila Base

UAM Philippines, Inc. took a meaningful step toward environmental sustainability by organizing a tree planting activity at the Makiling Agila Base, located at the foot of the iconic Mount Makiling in Laguna.

The event brought together employees and volunteers who enthusiastically rolled up their sleeves to plant native tree species in the area. This initiative supports ongoing reforestation efforts, helps combat climate change, and contributes to preserving the diverse ecosystems that thrive within Mount Makiling's natural landscape.

For many participants, the activity was more than just planting trees. It was an opportunity to reconnect with nature, bond as a team, and take part in a cause that extends beyond the workplace. One employee shared, "It's rewarding to know that the simple act of planting today will benefit communities and future generations for years to come."

The Makiling Agila Base is recognized as an important ecological site, providing shelter to various species and serving as a vital water resource. By choosing this location, UAM Philippines, Inc. aligned its corporate social responsibility program with conservation efforts that truly matter.

The day ended with smiles, muddy hands, and a renewed sense of purpose. The activity not only strengthened team spirit but also reinforced UAM's commitment to sustainability, community engagement, and environmental stewardship.

As the planted saplings grow, they will stand as living symbols of UAM Philippines, Inc.'s dedication to leaving a positive mark on the environment. The company looks forward to continuing programs that empower both people and nature to thrive together.
